printer I own a Epson dx6000 printer and got a new computer. Now it won't work I just got it the other day and I am trying to fix it. I have looked online and have tried many things. I have tried to change the driver with the same problems. I have tried it on two different computers and it didn't work. The printer works fine on my other computer that I got it from. I have also tried many things on the new computer but it does not work. The old computer I have it on I just need to make it work I don't want to buy a new one. So I need to fix it. Can anyone help me please. Replied by: Ronald replied on: 11/20/06 I use my Epson dx2000 to print wirelessly to my Epson dx6700 printer. It also works. On another PC I was trying to print and I changed the PC and it still didn't work. The only other thing I did was to change the printer and I also tried many other things to fix it. It did not work. When I try to do a print now, it says error and the instructions do not work. I also have the HP P1005 all-in-one inkjet printer and it works fine. I am not sure what the problem is. I have a Epson dx6000 printer. It works fine in Windows XP but it won't work in Windows Vista. I have tried to get it to work in Vista but no luck. All I have to do is turn it on and it will work for a while then it won't print and it will hang. I have tried unplugging the power, and plugging it back in. That doesn't work. I can still print from my old computer but not from this computer. I am not sure what the problem is. Can anyone help me please? Hi I have a Epson dx6500 it prints out the pages but when I put the page on the photocopier it starts to print it out but then it pauses the printer and then says the job was a failure. What could be wrong. I have tried different HP and Epson toner cartridges and changed out the inkjet cartridges but it still doesn't work. I have an Epson dx6500 printer and I am using Windows XP Home Edition. Everytime I go to print a page, I get 82157476af
